Geriatric Emergency Medicine Based around the core curriculum for specialist trainees and consultants, Oxford Case Histories in Geriatric Medicine is a valuable reference and teaching tool, which provides an opportunity for case-based learning across a rapidly growing field. This book uses well-structured and concise cases from the Oxford Emergency Department. Each case has associated questions on the differential diagnosis and aspects of management providing interactive learning material. Cases were chosen to illustrate specific disease processes relevant to geriatrics, ranging from the unusual presentation of disease, the presence of multiple interacting pathologies, possibilities for rapid deterioration, high incidence of complications of treatment, including adverse drug reactions and a need at times for difficult clinical decisions. Part of the Oxford Case Histories series, this book will be valuable reading for postgraduate trainees and consultants, and will be an essential resource for those preparing for exit examinations and revalidation. It is also the ideal tool for those who wish to improve their skills in diagnosis and management of a broad range of geriatric disorders.

Geriatric Emergency Medicine As the global geriatric population continues to grow, an increasing proportion of people reporting to emergency departments are elderly. The work-up of patients with acute medical or surgical conditions.

The elderly represent the fastest growing segment of the population in developed countries, reflected in the patient population presenting to EDs and hospitals. These patients more often than not have greater co-morbidities, more complicated workups and utilize more laboratory and radiologic services. This text is designed to teach the emergency physician how best to care for this patient group. The aging population is a unique demographic with its own health challenges. Geriatricians are specifically trained to address these challenges, but few medical specialists or students enter geriatrics, even as the demand for geriatric expertise increases. The practices of many medical and surgical specialists are dominated by older patients who may recognize many specialists but rarely visit geriatricians. This updated edition elucidates the most common medical conditions seen in aging patients and presents more often than not, related laboratory and radiologic services. This text is designed to teach emergency physicians how best to care for this specific demographic of patients. It addresses physiologic changes, high-risk conditions, and atypical manifestations typically seen in younger patients. This volume focuses on the unique pathophysiology of the elderly, presenting guidelines for resuscitation, evaluation and management. The first section discusses general principles including demographics, pharmacology and pain management; the following sections cover high-risk chief presenting complaints. Finally, topics of particular relevance in the geriatric population are discussed, including functional assessment, end-of-life care, financial considerations and abuse.
